Imaging Center

Our Dental 3-D Cone Beam can accurately capture, display and provide visualization of 3-D maxilla facial anatomy. This same machine can take Cephalometric X-rays needed for a successful orthodontics treatment.

All Porcelain Crowns

Our lab proudly offers all porcelain crowns for fix or removable restorations. We will create a custom

restoration for you every time from a single crown to a full zirconia bridge.

Flexible Partial Denture

Flexible partials create natural-looking and comfortable partial dentures so the you can look and feel your best.

See our dental brochure for more info | www.jaxdentallab.com

Implants

Our specialists are highly trained on sinus lift, bone graft and other advanced dental procedures. Years of experience allow them to complete cases from simple to complex. Our office has a surgery suite equipped with sedation and surgery armamentarium to facilitate the doctors and patients comfort and safety.

Your dentist can restore any implant using our lab. We fabricate any restoration from single crown, denture to full zirconia bridge.

Orthodontics

Our specialists can offer many types of braces.

Invisalign

Ceramic Brackets

3M™ Incognito™ Hidden Braces

Oral Surgery

Some dentists recommend removing wisdom teeth if they don't fully emerge or if they grow near the nerve of the lower jaw. Many dentists believe it's better to remove wisdom teeth before the roots are fully formed when someone is younger and more likely to recover faster from surgery. This is why some young adults have their wisdom teeth pulled before the teeth start causing problems and become more firmly rooted in the jaw. According to the American Dental Association, wisdom teeth removal may be necessary if you experience changes in the area of those teeth, such as:

- Pain
- Repeated infection of soft tissue behind the lower last tooth
- Cysts (fluid-filled sacs)
- Tumors
- Damage to nearby teeth
- Gum disease
- Extensive tooth decay

SCARED OF THE DENTIST?

Sedation is available for any procedure.
